To Whom It May Concern:

As the Director of Facilities of Bon Secours Cottage Health Services, I have found a great value in having Western Mechanical as part of our construction team. Western has always been a valuable asset in expediting and completing our projects within the designated schedules and budgets. We have used Western Mechanical on many multi-million dollar projects and mechanical system repairs.

Hospital work is very complex, difficult and unique. Not all mechanical companies can perform this type of work. Western Mechanical truly shines in this area. One of their strengths is their ability to coordinate their work activities around hospital functions, which minimizes hospital disruptions.

Western has also saved the hospital thousands of dollars by using leading technology such as Smart Tap. This enables the Hospital to perform major shut downs on our Medical Gas Systems, without going through the costly experience of recertifying the entire hospital.

I would like to single out Phil Orsi for his involvement and commitment to our projects. His ability to work with others and problem solve has proven to be an asset to the Bon Secours Cottage Health Services organization.

If you should have any other questions or please free feel to contact me at 313-343-1535.

Sincerely,

Thomas Kwiatkowski
Director, Facilities
Bon Secours Cottage Health Services
